GEWISS Group

GEWISS is an international leader in the production of systems and components for low voltage electrical installations. The fact that development is seen as a constant management feature has permitted GEWISS to assert itself as a reference interlocutor for the electrotechnical market in the creation of solutions for domotics, energy and the lighting industry. It is now present in Italy, France, Germany, the United Kingdom, Spain, Portugal, China, Russia, Turkey, Romania, Chile, the United Arab Emirates, and in a further 80 countries around the world.

BUILDING

Junction boxes and special containers, a complete and coordinated line of distribution boards, cutting-edge industrial connections and an integrated system of boards for special systems create the GEWISS distribution systems.

DOMOTICS

The domotic systems offer cutting-edge solutions for smart home and building management and control, guaranteeing safety, comfort and energy savings along with Italian design.

POWER

The technologically advanced range of modular and moulded-case devices joins the vast range of distribution boards and cabinets, enclosures and combined boards to create the GEWISS Protection System.

LIGHTING

Lighting systems designed for every room, area and location. Solutions that embrace LED technology to meet the requirements of industrial and commercial sector contexts, sport facilities and emergency lighting.

Discover the complete offer

GEWISS distribution and connection systems.

GEWISS offers a complete industrial power distribution and supply system to meet every need. Construction sites distribution systems (68 Q-BOX/Q-DIN range), energy and service distribution terminal system (68 Q-MC range) and distribution boards (68 Q-DIN range) combined with plugs and socket-outlets (IEC 309 range) or interlocked socket-outlet systems (IB range). GEWISS, market leader in the junction boxes and enclosures sectors, provides also a complete, co-ordinated range of surface and flush-mounting distribution enclosures and boards. GEWISS conduits, accessories and cable trays are able to connect all the elements of the Integrated Electrical System.

IEC 309 HP: a byword for perfection

IEC 309 HP - HIGH PERFORMANCE is a complete range of mobile plugs and mobile and flush-mounting socket-outlets for currents from 16A to 125A available in protected version (IP44/ IP54) and in watertight version (up to IP66/IP67/IP68/IP69). The product is at the **top of its segment in terms of reliability, practicality, performance** and technical characteristics when

it comes to industrial connections. All the products of the range are distinguished by their coordinated, modern, practical design that makes them instantly recognisable and adds extra value to the entire GEWISS system of industrial connections. Total protection, mechanical robustness, ergonomics: the IEC 309 HP range is a byword for perfection.

Total protection

GEWISS is the world's first manufacturer to offer "total" protection against the infiltration of solid bodies and/or liquids. Apart from the IP66/IP67 degrees of protection in fact, the IEC 309 HP straight plugs and sockets also have two extra degrees of protection - IP68 and IP69.

Safe and robust

The materials and considerable thickness guarantee excellent resistance to mechanical stress (IK09), even at low temperatures (down to -25°C). The range offers performance levels that are decidedly superior to both the regulation standards and market standards.

Practical, functional and ergonomic

Its ergonomics and technical details make the new range unique: the technical solutions are designed to facilitate and speed up the installation phase whilst still ensuring GEWISS' renowned attention to quality and safety.

The innovative aspects of the IEC 309 HP range

IEC 309 HP 16-32A

Fast phases reverse

Versions IEC 309 HP INVERTER allow the fast exchange of two phases by using a screwdriver to reverse the direction of rotation of three-phase motors.

CLICK!

SAFE-LOCK system

Connection speed, simplicity and safety

The technical and functional aspects of the fast-wiring versions reduce the connection times (compared with traditional versions) by half. This solution uses levers that are easy to open and close, and they're coloured to ensure the polarities can be immediately identified. In the screw wiring versions, all the screws face in the same direction and are completely loosened.

Fast, safe closure in every situation

SAFE-LOCK is the new body-grip closure system based on 1/4 turn coupling and anti-slackening friction. The 1/4 turn safety screw shows clearly whether the system is open or closed, and it can be used time and time again.

IEC 309 HP 63-125A

Rubber protection

Enlarged cable clamp

Mantle wiring

Maximum impact resistance

The structural design uses inserts in **overprinted rubber** to protect the parts particularly subject to impact, and employs top quality technopolymers. The body-grip closure system has stainless steel screws and brass inserts embedded in the body. This guarantees greater impact resistance, even when the product is used in heavy-duty conditions.

Easy, accurate wire tightening

The cable fastener gland, with radial precision tightening, offers the **widest selection of diameters** available on the market. Thanks to the sizing of the cable relief, the shape, and the overprinted rubber parts of the ring nut, it's extremely easy to tighten the wire, even by hand. The back part of the ring nut also has a large, firm area for carrying out opening and closing operations with tools.

Safe connection

The connection of the wire using screw terminals with indirect tightening ensures the highest possible level of safety, guaranteeing the best contact surface and pressure even with non-terminated wires. The nickel-coating on the plug pins and sleeves, and the "**HIGH QUALITY CONTACT**" offer the maximum reliability of the electrical connection.

HORIZONTAL INTERLOCKED SOCKET-OUTLETS IEC 309 STANDARD

IB range: there's no one better than us

The interlocked switched socket-outlet system, which complies with standard IEC 309, is composed of the 67 IB range (vertical interlocked switched socket-outlets), the 66 IB range (vertical interlocked switched socket-outlets for heavy-duty applications), the 44 IB range (horizontal protected interlocked switched socket-outlets) and the COMBIBLOC range (compact interlocked switched socket-outlets).

67 IB – vertical sockets

Watertight vertical socket-outlets IP67 with current from 16A to 63A, available in versions: with rotary switch (SBF), with rotary switch and fuse holder base (CBF), and with MCB integrated (AUTOMATIKA). Design co-ordinated with high performance blu fronts, guaranteeing resistance against impact, chemical agents, and UV rays.

66 IB - for heavy duty

The 66 IB range is suitable to be installed in heavy-duty environments and wherever conditions are critical from an atmospheric, chemical and mechanical point of view.

44 IB - horizontal socket

44 IB range is ideally suited to use in light industry and the commercial sector. Their compact shape dimensions make it possible to fit a large number of socket-outlet in a small amount of space.

COMBIBLOC - compact versions

COMBIBLOC range is the most compact range of interlocked sockets for industrial application on the market, and are characterised by the simple and intuitive longitudinal operation of their mechanical interlock.

The innovative aspects of the 67 IB range

AUTOMATIKA - WITH CIRCUIT BREAKER PROTECTION (MCB)

Reduced space into the boards

Control LED for each single line

MCB can be reset using external handle

SBF - WITH ROTARY SWITCH, WITHOUT FUSE HOLDER BASE

Lockable in ON/OFF position

The control switch guarantees top electric performance

Easy wiring and maintenance

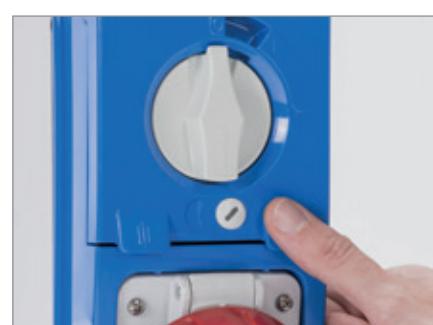

CBF - WITH ROTARY SWICH, WITH FUSE HOLDER BASE

Automatic safety closing mechanism

The fuses are automatically removed from the base

Fuse system closing by hand

Vertical surface-mounting
socket-outlets with electric
interlock, with circuit breaker
protection

The codes with the suffix "N" refer to the products of the new range of IP67 vertical interlocked switched socket-outlets, and correspond to the product codes of the previous range without the letter "N" (apart from the Automatika version); they can therefore be installed on the Q-DIN boards of the old SBF versions, allowing any replacement or modification even on boards already installed.

Using the GW 66 715 N adapters for 16-32A versions, and GW 66 716 N for 63A versions, they can also be installed on the Q-DIN boards or modular bases of the old CBF IP55 versions.

ENERGY AND SERVICE DISTRIBUTION PEDESTALS

The industrial boards system for energy distribution

The 68 Q-DIN range is used in commercial and industrial contexts, and on construction sites.

They are the most compact models available on the market and come in both wired and unwired versions, in compliance with the IEC 61439 Standard.

Versions with 5, 10, 14 and 20 DIN modules (EN 50022), with an extra 14 or 20 modules available (up to a total of 40) to create more DIN space. IP65 protection degree guaranteed also by the innovative handle closure of the door.

For flush-mounting and interlocked socket-outlets from 16 to 63A, protected or watertight, and for domestic sockets SYSTEM range.

Available also versions to fix domestic sockets (German or French standard) dimensions 50x50 mm.

A wide range of accessories such as pole couplings, wall brackets, transportation handles and mobile supports complete the range and satisfy any requirement.

Up to 63A

The 20-module versions support the IEC 309 socket-outlets with or without interlock, up to 63A, without requiring boards of different sizes.

More DIN space

The internal space of the boards means they can house up to 20 DIN modules. With the additional module, you can even have up to 40 modules.

Emergency push-button

On versions with 10, 14 and 20 modules, an emergency push-button can be fitted on the top, where it is clearly recognisable and accessible.

Wide and configurable range

The power distribution board range is made up of 26 empty casings with IP65 degree of protection, for flush-mounted and interlocked socket-outlets up to 63A, and with numerous complementary items that increase the fields of application.

Innovative technical solutions

The boards have many innovative technical features, such as the ergonomic handle, which simplifies the opening of the door, and the screws to "hinge" the front facilitating wiring. Additional enclosures 14 and 20M modules are also available, ideal for increasing the modular space.

Accessory combinations

The boards can be equipped with a key lock with a metal cylinder and mushroom emergency button. They can be fixed to a pole, surface-mounted, flush-mounted or on accident prevention mobile supports.

A complete and flexible system for each construction site

The 68 ACS range is a unique solution for **construction site contexts**, consisting of boards **complying with Standard EN61439-4** and with lighting and signalling devices: a complete range of products to meet every electric need, from the smallest construction site to the biggest one. Gewiss' ACS system perfectly combines the various elements of the boards (casing, energy socket-outlets and protection devices) to guarantee the **excellent electric and design coordination** of the entire system, plus **high safety levels in all conditions**. These products are designed, in fact, to withstand the effects of wear, impact and the stress caused by atmospheric agents (bad weather, major temperature differences and long exposure to the sun) – typical features of open-air sites.

EN 62208

A complete system

GEWISS offers a wide range of wired versions that are ready for use, and unwired versions that can be personalised to suit the specific construction site requirements.

Up to 12 socket-outlets

The use of the special panels extends the number of possible configurations, offering up to 12 compact interlocked switched socket-outlets in a single board.

Up to 60 modules

Thanks to the panel with a 12-module DIN rail, up to 60 DIN modules can be installed, along with circuit breakers of up to 160A.

68 QP ACS and 68 CDK ACS

The main **supply boards** for the construction site: installed immediately downstream from the energy meter, to protect the line from the delivery board to the main site distribution board. They are available in versions with power levels from 17 kW (32A) to 130 kW (250A), all fitted with an emergency push-button.

68 Q-BOX ACS

Thermoplastic **boards** with optimum impact and weather resistance, ideal for **primary and secondary distribution** on construction sites, shipbuilding sites or temporary uses. Available in two sizes, Q-BOX4 and Q-BOX6, they allow to house up to 12 interlocked socket-outlets or, alternatively, up to 60 DIN modules.

68 Q-DIN ACS

Mobile, transportable **terminal boards** that are especially suitable for powering mobile tools and equipment. The accessories - including handles, floor-mounting supports and wheeled carriages - make it extremely easy to move the boards around the site.

Design and safety for all needs

The pedestals of 68 Q-MC range are the ideal solution for the distribution of energy, water, data signal and services suitable for marine, camping and urban areas.

They are available in six different dimensions and in two material: stainless steel AISI 316L or thermoplastic.

The system combine an attractive design of sleek lines and geometries with top technical performance and best resistance to chemicals and atmospheric agents. They are available in version already wired and certified, or in empty configuration o be complete depending on different needs.

Electronic system

The pedestal can also be equipped with an electronic management system that allow the owner of the implant to monitor the status of the pedestal in real time and manage the consuption of energy and water supply.

Access control

The access control can be integrated in the system with 68 Q-MC terminal boards with electronic management in order to allow the access of people in determinated areas, or to enable the use of specific services.

Fire fighting

The fire fighting pedestals are estetically coordinated with the standard version in termoplastic or in stainless steel material. They are pre-arranged for housing hose and lance or fire extinguisher.

The innovative aspects of the 68 Q-MC range

68 Q-MC - MADE IN STAINLESS STEEL MATERIAL AISI 316L

Double insulation

Water kit separated by energy supply

Top made in thermoplastic material to avoid burns

68 Q-MC - MADE IN THERMOPLASTIC MATERIAL

Available with current up to 400A

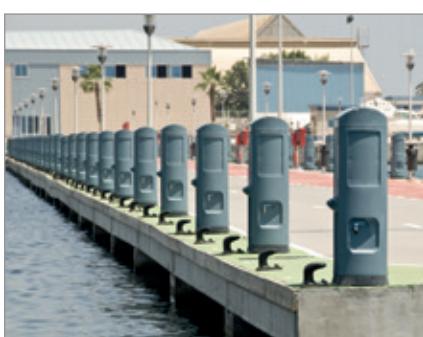

High capacity version with security door

Green version for E-bike recharging

EXAMPLE OF APPLICATION

Ports and marine

Camping, park and green areas

Urban area, public market and industries

Electric vehicle recharging

R-EVolution

UNITS FOR ELECTRICAL VEHICLE RECHARGING

The answer for smart mobility

E-Mobility, also known as electric mobility, has become one of the buzzwords of our time. The JOINON range represents a breakthrough in terms of solution for energy use, for both public and domestic area: in accordance with IEC 61851 standard, these products enable the connection and charging of all electric cars currently on the market.

The range consists of two product lines: the **JOINON EASY** range with its highly recognisable design, offering "simplified"

solutions for EV recharging, and the **JOINON PROFESSIONAL** range that includes versions with high technical performance, able to meet the most complex recharging requirements, and offering the possibility to be connected with web services. Gewiss' EV recharging system is therefore ideal for any type of installation, guaranteeing specific, customised solutions to meet all the customer's needs.

JOINON EASY

EASY products are made of green thermoplastic material for a highly recognisable design that can be easily identified even from a distance, and they are resistant to impact and UV rays (in accordance with EN62208).

The EASY recharging units are ideal in private and/or public contexts, allowing socket-outlet activation to be managed by means of rechargeable transponder keys with the aid of a programmer, guaranteeing optimum customisation flexibility with regards tariffs and recharging solutions.

The new product line offers the following versions:

- **EASY HOME:** surface-mounting recharging stations

in MODE 2 and MODE 3, available with either a mobile recharging connector (Type1 or Type2 and a 5-metre cable) or a fixed socket-outlet (Type 2), and maximum power up to 4,6 kW;

- **EASY PARKING:** surface-mounting recharging stations in MODE 3, equipped with a fixed recharging socket-outlet (Type 2) with a power level of 7.4 - 22 kW for recharging the vehicle in little more than an hour at the most.

- **Q-MC E-bike** charging stations: compact terminals for recharging E-bikes.

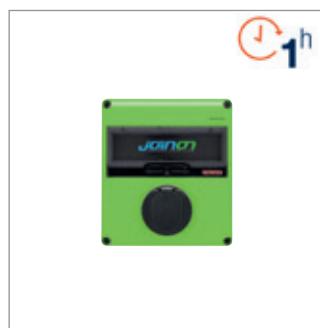

EASY HOME

With a mobile connector or fixed socket-outlet (activated with a selector).

EASY HOME M2

With domestic or industrial recharging socket-outlets (activated with a selector).

EASY PARKING

With fixed socket-outlets (activated with a transponder key).

Q-MC

Floor-mounting charging station for E-bike.

JOINON PREMIUM

Premium models are made of aluminium with high impact resistance (IK 10) and are vandal-proof (anti-graffiti treatment).

They are conceived and designed for both indoor and outdoor installation, whether the installation is private or public.

The recharging operation can be activated by RFID card, or through a dedicated JOINON APP.

The product line has the following versions:

- **PARKING:** surface-mounting recharging stations in MODE 3, with a fixed recharging socket-outlet (Type2) with a

power level from 7,4 to 22 kW;

- **PARKING+:** floor-mounting outlet boxes with 2 recharging socket-outlets (Type2) with a power level from 7,4 to 22 kW;
- **STATION:** quick recharging stations in DC that can supply up to 50 kW per socket-outlet.

PARKING

With a fixed socket-outlet Type 2 (activated with an RFID card or by APP).

PARKING+

With 2 fixed socket-outlets Type 2 (activated with an RFID card or by APP).

Q-MC

With a CHAdeMO or COMBO2 or Type 2 connector (activated with an RFID card or by APP).

Control and signalling

70 RT HP

ROTARY ISOLATOR

74 PS

PUSH-BUTTONS, SELECTORS AND INDICATORS Ø 22MM

High-performance surface-mounting rotary isolator

70 RT HP is a new range of 16A to 160A isolator in isolating material and metal, supplied in a box. Available in control and emergency versions, the range is completed by board versions for front-panel or DIN rail assembly, from 16 to 63A options, all of which can be equipped with auxiliary contacts. These devices have been designed for deliver the ultimate

in reliability, functionality and performance, offering a technologically advanced solution that simplifies installation, reduces wiring times and ensures maximum safety and robustness, even in the most demanding conditions, thanks to the use of high-performance materials.

- The only system with a IP66/IP67/IP69 degree of protection
- The fastest front opening/closure system available
- Simple and convenient to assemble
- High resistance to shocks and mechanical stresses
- Resistant to UV rays and chemical agents
- Modern and ergonomic design and coordinated aesthetics from 16 to 160A

Indoor applications

Outdoor applications

ATEX applications

The innovative features of the 70 RT HP range

TOTAL PROTECTION: These rotary switch disconnectors come in a plastic box, and offer a degree of protection of IP66/IP67/IP69, thus ensuring that products are fully guarded against dusts and liquids, even when exposed to high pressure and high temperature jets of water, making them particularly suitable for even the most demanding application environments.

QUICK ASSEMBLY: The front is fixed in place with four 1/4 turn plumbable captive screws, a simple and innovative system that enables the front to be fixed or removed in significantly less time than any other system available on the market today.

RELIABILITY: The rotary switch disconnector is at the heart of the new product offering. Indeed, this device is fundamental to ensuring reliability when sectioning an electrical line/network, and for this reason, it has been designed to ensure optimal electrical performance, allowing even highly inductive motors to be managed under load (AC23A utilisation category).

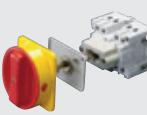

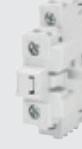

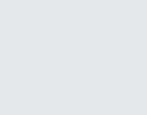

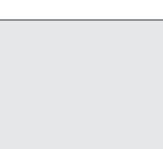

VERSATILE AND INNOVATIVE: A host of technical solutions have been introduced with the new plastic box switch isolators, designed to facilitate installation: features such as the double metric inputs on the upper and lower sides, the external points for surface mounting and plenty of internal space for wiring make these products extremely easy to assemble and install.

Push-buttons, selectors and indicators ø 22mm

The 74 PS range: a system of push-buttons, selectors and indicators (diameter 22mm) with an IP66 degree of protection, for creating a real interface between the man and the machine, whilst at the same time controlling the operating status of the drives and equipment to ensure the best safety standards.

Quick choice

The special feature of the 74 PS range is the ease of product configuration: the indicator lights are already fitted with a nut so they can be fixed to the panel. They have a contact-holder flange so, by adding the NO and NC contacts, you can create the specific command logic for each system.

LED technology

The products of the new 74 PS range that can be illuminated should be combined with LED lamps with BA9S coupling to guarantee top performance, 100% reliability and a longer lifespan, all of which means less maintenance too.

Quick installation

Thanks to the practical clip coupling mechanism of the contacts, panel assembly times are drastically reduced. Double contacts are also available, to increase the installation flexibility and to be able to install up to four contacts plus a space for a lamp coupling on the 3-gang flanges of the indicator lights.

Quicker to wire than to describe

The best of practicality.

Four ranges fitted with watertight surface-mounting boards, for automation and distribution, offered in the following typologies of materials:

- termoplastic 44 CEP - IP55;
- glassfiber thermosetting 46 QP - IP66
- painted metal 46 QM - IP55
- stainless steel 46 QX - IP55.

All products of the range are characterised by a high structural resistance and by a great simplicity of rapidity of installation thanks to the Fast & Easy accessories common to the whole 46 QP, 46 QM and 46 QX Range.

These boards are available with blank or transparent door to offer the maximum flexibility and universality of the uses.

46 QP - ideal for photovoltaic applications

Up to 40% reduction on installation time

EN 60754-2 Versions with halogen-free material

EN 62208

Adjustable DIN rails and extractable metal frame

The DIN rails, adjustable and with quick locking, are supplied preassembled and ready for the automatic insertion into the bracket. The extractable frame is made with completely metallic locking elements. The support brackets for DIN rails and panels are snap fitted on the uprights.

Front panels with 1/4 turn screws

The front panels are fitted with unlosable, plumbable, 1/4 turn plastic closing screws. The panels with window are already complete with DIN rail. Moreover the panels of the F&E system can be fitted directly on the internal side walls of the 46 QP boards (apart from size 7 QP boards).

Accessories for increasingly versatile boards

The 46QP boards have a wide application field, thanks to the considerable range of accessories such as insulating and metal back-mounting plates, kits for moulded-case switches up to 250 A, pole-fixing kits, double DIN rails, reversible polyester and metal inner doors.

NOTE: the configurations given in the table are ONLY valid if the peak current of the indicated switch (corresponding to the assumed short-circuit current in the installation point) is NOT higher than 17kA, or if the assumed short-circuit current in the delivery point, in line with the main board switch, is NOT greater than 10kA.

Check the thermal power according to the method indicated in the Technical Catalogue.

The kits are fastened by means of uprights. The kit panels are 2-module high.

The MTX 160c and MTX 160 (both 3P and 4P) should be fastened to the DIN rail by means of the specific brackets contained in the GW D8 261 kit. The MTX 250 (both 3P and 4P), on the other hand, require the GW D8 262 kit.

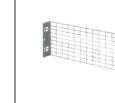

The coupling of the MTX moulded-case devices on the DIN rail, using the relative residual current device, requires the use of the special brackets that can be found in the relative section of the DIN catalogue. In the case of cable entry from below, you are advised to insert a blank panel above the moulded-case/switch disconnector kit, so the wires can be pulled more easily.

The MSS switch disconnectors cannot be installed on the same DIN rail with the MTX moulded-case devices because of their different depths.

40 CDK – modular watertight enclosures and distribution boards

Range of watertight enclosures IP65 from 4 to 72M, in version with transparent door. Thanks to the reversible back-mounting box and front, the doors on 40 CDK range products can open to the right or left. The extractable frame, accessorised with compartment dividers to allow for installation of devices

operating at different voltages, facilitates and speeds up wiring operations. The door can open to more than 180°, is detachable and can be accessorised with cylinder security locks to ensure maximum security and resistance, including in the case of installations in areas open to the public.

versions with
terminal blocks

Removable front panels and
extractable frame

Spacious surfaces for conduit
couplings

Accessorised with bi-polar and
singol-polar terminal block
IP20 - 80A

versions with
terminal blocks

40 CD – decorative enclosures IP40

The protected decorative enclosures come in versions from 8 to 72 modules, either with a transparent door or with a blank white door.

A rounded front with a compact, minimalist form, is enhanced by the “push” opening system.

40 CD – watertight enclosures IP55

A range offering versions from 4 to 36 modules. The enclosures are ideal to create small systems in enclosed spaces, on-board, workbench or technical room applications.

Individual doors, located on each modular row and equipped with a separate upper opening, guarantee high and individual accessibility to each modular row.

40 CD – protected enclosures IP40

The protected enclosures, from 2 to 36 modules, are ideal for holding equipment subject to frequent, repetitive use or power take-off.

The version 2 modules is proposed with plumbable front, that help to prevent tampering and guarantees content inviolability, particularly when this appliance is used as sub-meter to protect the upright.

42 RV SURFACE-MOUNTING AND FLUSH-MOUNTING WATERTIGHT EMERGENCY ENCLOSURES

Maximum protection, safety and combination possibilities

The five emergency enclosure versions allow users to select the most appropriate product for any installation need thanks to the special pre-arrangements: for Ø22mm devices, for modular devices and devices with a back-mounting plate. Red or grey flush-mounting versions are also available.

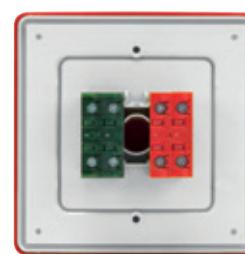

All enclosures boast a high IP55 degree of protection and, thanks to the emergency hammer (available as an accessory) and the watertight security lock or sealable mask, are ideal for use in areas open to the public.

Increases the number of applications in the same space

The GW 42 201 enclosure comes ready fitted with a short and long push-button for deliberate and precautionary operation or real safety operation.

It also has a back-panel flange for extending the number of installable contacts to 4, thereby enhancing the possible configurations with the same product.

Renewed, to stand out

A complete system of watertight surface-mounting junction boxes made from groundbreaking materials to provide innovative solutions.

The 44CE Range is realized in three different self-extinguish materials:

- GWPLAST 75 - GWT 650°C for ordinary junctions; Halogen Free
- GWPLAST 75 - GWT 960°C for special uses (RINA certified)
- GWPLAST 120 - GWT 650°C for industrial uses; Halogen Free

Main features:

- three degrees of protection - IP44, IP55 and IP65
- 11 sizes available in two versions - with smooth walls or with the new quick-entry cable gland
- 6 types of cover: clip/screw, 1/4 turn screw, blank/transparent, plain/deep
- watertight junction boxes with a high-capacity bottom, with smooth walls (without ribs) for assembling conduits with diameters up to 50mm

Versions for photovoltaic applications

EN 60754-2
Versions with halogen-free material

GWT 960°

Versions with GWT 960°C material

Versions with RINA certification

Boxes fitted with the new cable gland

The new quick-entry cable gland offers high mechanical performance levels and innovative geometry for use with rigid cables and conduits, improving the practicality and reliability of the IP degree of protection.

“Spherical head” screws and box back grooves

The screws for closing the 190x140mm cover in insulating material allow the easy application of tamper-proof seals, and also double up as hinges (patented technology). The grooves on the back of the box facilitate the assembly of devices, terminal blocks and back-mounting plates

Unlosable cover and inner edge with innovative profile

The cover of 1/4 turn screws junction boxes can be easily handled in any type of installation and makes quick maintenance operations possible. The 1/4 turn screws are also unlosable. The innovative inner edge guarantees retention of the IP degree over time.

Metal junction box range for surface mounting

The GWConnect range includes seven different sizes of junction box and connections made of die-cast aluminium alloy. Suitable for any application but ideal in the industrial sector and on-board machinery, especially in hostile working conditions. ATEX versions are available.

JUNCTION BOXES IN DIE-CAST ALUMINIUM IP66

	GW 76 267	GW 76 287	GW 76 297	GW 76 277

(*) NOTE: the ATEX products are only available in the following countries: Austria, France, Germany, Italy, Liechtenstein, Luxemburg, the Principality of Monaco, the United Kingdom and Spain. For all other countries, contact GEWISS Technical service assistance.

Practical and robust

The 7 sizes are all pre-arranged for surface-mounting, with both internal and external fixing. The unusable lid screws are made of stainless steel. Thickness is optimised to ensure maximum mechanical resistance and to withstand adverse weather and environmental conditions.+

Professional range

The boxes, with IP66 degree of protection, can be used as junctions with the possibility of fitting back-mounting plates or DIN rails. The lid is equipped with stainless steel captive fastening screws, while the back plate is equipped with insert for earthing.

ATEX versions

The GW Connect boxes are also available in an ATEX version. They blend perfectly with the other GEWISS solutions for potentially explosive atmospheres classified as area 2(G) and 22(D).

Domo Center FLUSH-MOUNTING SYSTEM COLUMNS FOR DISTRIBUTION, DOMOTICS AND DATA

A solution in harmony with the surroundings

DOMO CENTER is the system column designed by Gewiss for residential and commercial use.

This solution transforms the domestic system into a furnishing accessory, with its modern design that adapts to suit the context. It centralises and rationalises the existing services, from the most traditional to the most advanced, in one single device.

The Domo Center range is divided into 2 parts:

- **Front configuration kit** • already configured with all the necessary items for setting up the system column (with the exception of the back-mounting box)
- **Components** • the single elements needed to create any type of KIT

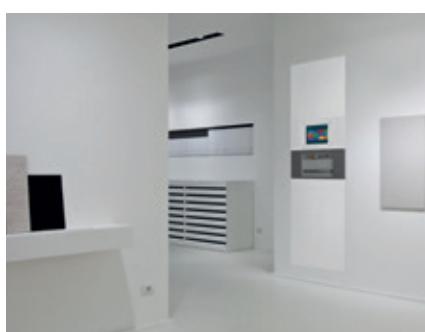

- **Flush-mounting back-mounting box, 2700 or 2400mm high**
- **External dimensions 2400 and 2100mm**
- **Protrusion of only 25mm from the wall, with suspended effect**
- **Modular capacity of up to 320 modules**
- **Versions already configured (kits) in different types**

reddot design award
winner 2016

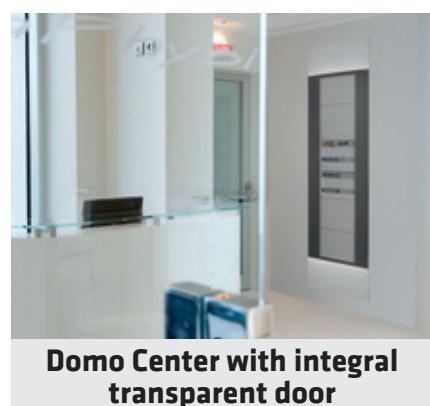

Applications

Domo Center with exposed functional panels

Domo Center integrated with the furniture style

Domo Center with integral transparent door

HOW TO REQUEST THE MOST SUITABLE CONFIGURATION (KIT)

Contact Customer Service (sat@gewiss.com) or the sales organisation for cost estimates and support for configuring your system. The request procedure is facilitated by the Gweb DOMO CENTER software, available free of charge at gewiss.com.

Available finishes

DOMO CENTER can be configured in numerous solutions, with or without doors.

In fact, personalised configurations can be created by simply combining the system column with the Domo Center components. The version with door is available in three different materials: smoked transparent glass, full mirror or metal.

e.g. version 2700 with door

Green Wall FLUSH-MOUNTING SYSTEM FOR LIGHTWEIGHT AND PLASTERBOARD WALLS

The most complete flush-mounting system for plasterboard

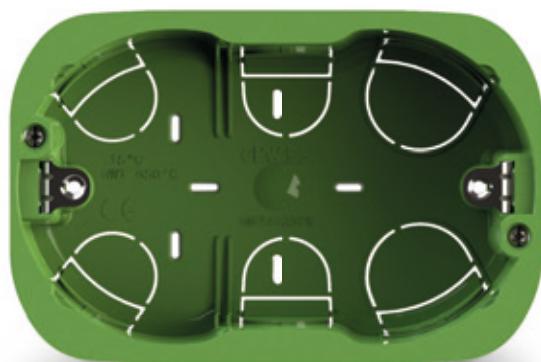

The GREEN WALL range is the range of GEWISS products for plasterboard walls. It's the most extensive and complete flush-mounting system on the market for this specific type of installation.

The main characteristics of the GREEN WALL range are:

- special green technopolymer with GWT 850°C (as required by product regulations) and halogen-free (in accordance with EN 60754-2)
- quick, easy installation thanks to the innovative fixing solutions
- mechanical robustness and reliability

The range consists of 22 new codes, sub-divided into four product lines:

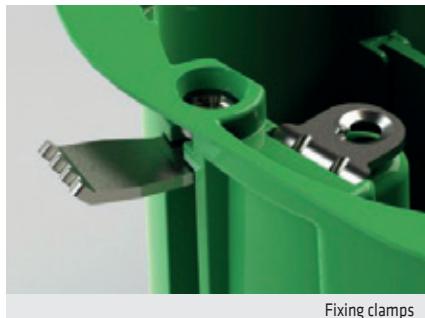

- enclosures and distribution boards
- standard and high-capacity junction boxes
- boxes for modular domestic ranges and KNX/digital vision devices
- boxes for vertical and horizontal interlocked switched socket-outlets

Robust, practical boxes with firm fixing

Distinguished by their robustness and easy installation, the boxes for domestic ranges are equipped with unlosable metal clamps with tear-proof fixing, so they can be quickly and firmly attached to either single-sheet or double-sheet walls.

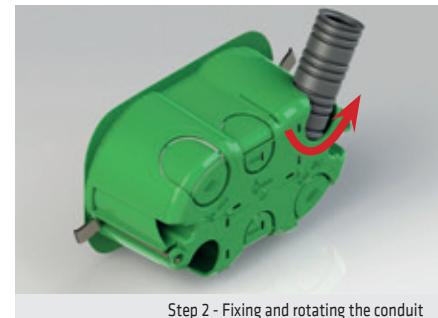

The boxes, with 3, 4 or 6 gangs, have knockouts for conduits Ø 20mm or Ø 25mm, and opening profiles for conduits Ø 16mm or Ø 32mm. Their special geometry makes it easy to insert the conduit, which is firmly held in its seat; the "L" profile of the knockouts allows the conduit to rotate in its seat, facilitating the positioning of the box in the wall cavity.

Fixing clamps

Step 1 - Inserting the conduit

Step 2 - Fixing and rotating the conduit

The flexible, reliable fixing system

The GREEN WALL range introduces the concept of tabs for fixing enclosures, boards, boxes for interlocked switched socket-outlets, and junction boxes. The tab system is a flexible one, suitable for all assembly situations; user-friendly tabs speed up the positioning and fixing of the containers. The outer edges of all the containers have cusps: specific reference points that make it easier to mark the sheet in preparation for the cut. Depending on the specific needs, the tabs can be fixed in three different ways:

- on a metal frame:** a frame is inserted between the two vertical uprights, or an additional horizontal frame is used. The structure is created with the aid of special screws for use with plasterboard, then the back-mounting box is fixed to the frame by means of the tabs.
- on sheet:** the back-mounting box is fixed to the back of the sheet with the aid of the tabs, then anchored from the front of the sheet with special screws for use with plasterboard.
- on a masonry wall:** the back-mounting boxes have specific references so they can be fixed to masonry walls with the aid of wall plugs, after which the plasterboard sheets are positioned on top (this method is often used during renovations).

ARTICLES	ON METAL FRAME	ON SHEET	ON MASONRY WALL
Enclosures and distribution boards	✓		
Junction boxes			
Boxes for interlocked switched socket-outlets 67IB and 44IB	✓	✓ (with tabs*)	✓
Boxes for domestic ranges - 3/4/6 gangs		✓	
Boxes for round domestic ranges - 2 and 2+2 gangs		✓ (with clamps)	
Box for domestic ranges - 8 gangs (4+4) **	✓	✓ (with tabs*)	
Box for Master and Vision Master	✓	✓ (with tabs*)	

* Tabs on the sides of the horizontal walls. Boxes (24, 36, 54, 72 modules) and box for interlocked switched socket-outlets (67 IB) equipped with fixing tabs on the sides of the vertical walls.

** Can also be used for the installation of command panels and video entryphones.

40 CDi - decorative enclosure

The contemporary, linear, refined design of decorative enclosures combines perfectly with the shapes and colours of the Chorus domestic range, offering excellent design integration in both the residential and commercial sectors. The technical details of the design combine practicality with style: the curve of the front and door minimises the overall dimensions, avoids the build-up of dust, ensures notable impact resistance, and enables even the bulkiest devices to be installed.

In addition, the door is ergonomically shaped at the edge, not only to indicate the opening side but also to provide a safe, comfortable grip.

Available in four colours to produce refined design solutions, the range of enclosures (4-36 modules) allows the creation of general and distribution boards for conventional and domotic systems.

versions with
terminal blocks

Co-ordinated with the
Chorus domestic range.

Smart and elegant curves.

More space for wiring
and devices.

Door resistant
and reversible.

40 CDKi – Modular enclosures and boards - IP40

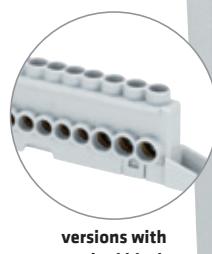

A product offer encompassing as many as 10 different sizes, from 2 up to 72 modules, available both in smoked transparent door versions (particularly suitable for the industrial and commercial sectors) and with blank door (ideal for domotics applications).

Highly durable doors, hooked using elastic hinges and capable of opening to over 180°.

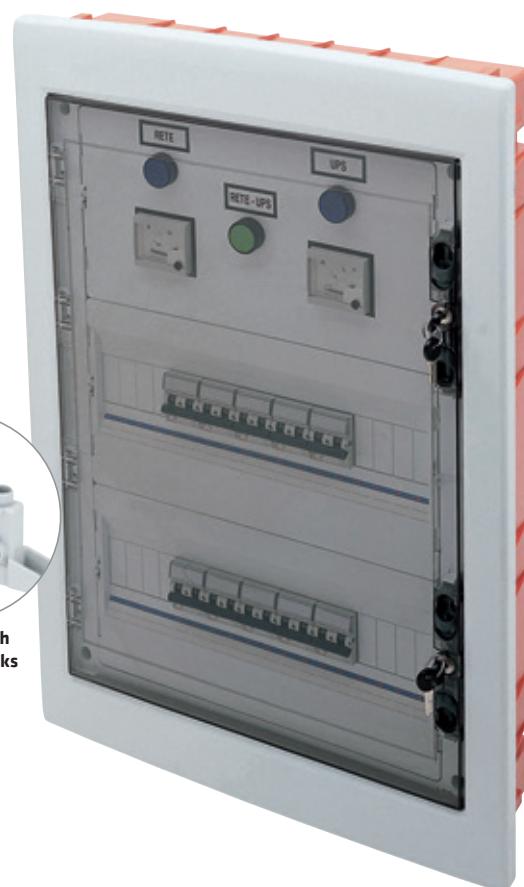

The panels are removable and plumbable, and the frame can be extracted for bench wiring operations.

EN 60754-2

**versions with
terminal blocks**

48 PTC – Watertight modular enclosures – IP55

The enclosures with 6 and 12 modules and combined boards are ideal for creating both vertical and horizontal battery enclosures, via through coupling devices.

Thanks to the special gasket, located behind the frontal panel, it is possible to create watertight flush-mounting systems, particularly suitable for distribution in industrial and commercial sectors.

More space for conduits, wiring and now also for domotics

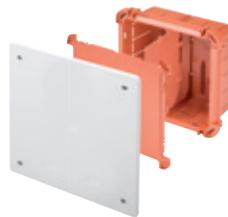

A system of flush-mounting connection and junction boxes and now also suitable for the domotics devices developed to respond to the specific installation needs of the domestic and tertiary sectors.

This system consists of three different product lines:

- 48 PT / PT DIN range: boxes for junction, connection and domotics with a mortar guard element (integrated DIN rail on the back-mounting box, starting from size no. 6) - IP40
- 48 CM range: high-capacity boxes with a protective shield - IP40
- 48 PTC range: boxes for modular junction, command and distribution, with a protective mortar guard shield - IP40/IP55

48 PT/PT DIN
for ordinary applications and domotics

48 CM
for studs

48 PTC
for special applications

EN 60754-2

Range rigid conduits

The GEWISS rigid conduits and accessories allow you to create articulated systems in optimum safety conditions, in any type of environment and for any type of installation.

The range consists of 4 types of conduits, all of which comply with standards EN 61386-1 and EN 61386-21:

RK15: 3321 classification (standard applications)

IRL/B: 3321 classification (sleeved, for standard applications)

RKB: 4321 classification (heavy-duty applications)

RKHF: 4422 classification (heavy-duty applications that require halogen-free versions for maximum safety)

Accessories

Wide range of couplings, joints and routing components for implementing complex and articulated exposed systems. Possibility of obtaining two degrees of protection: IP40 and IP67.

Halogen-free version

The RKHF conduits and couplings create totally halogen-free systems - the ideal solution for installations in public and crowded environments, thanks to their lower toxic emissions in the event of fire.

TRIX and QUADRIX boxes

The snap-fit assembly of boxes with specific accessories always ensures perfect watertight conditions thanks to the O-ring seal. The box cover can be assembled by simply pressing it, thus ensuring faster implementation and system inspection simplicity.

In bold: versions with halogen-free material

FK15, FKCO Range pliable conduits and ICTA, FKHF Range pliable self recovering conduits

FK15 range: medium pliable corrugated conduits with 33212 classification, diameter from 16 to 63 mm, in six different colours - available in versions with or without a cable puller-feeder - for identification of the various lines in the electrical system.

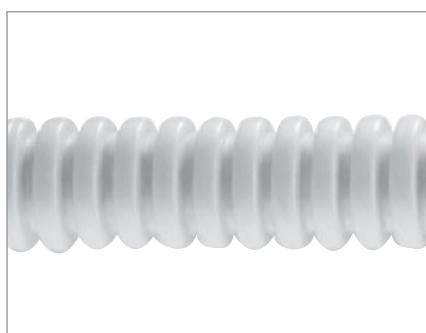

ICTA medium pliable and self recovering corrugated conduits with 34223 classification thanks to their Low Opacity (EN 61034 - 2) and Halogen Free (EN 60754-2) materials are ideal for installation in public environments: thanks to their halogen-free material, the smoke created in the event of a fire has lower opacity and toxic emissions.

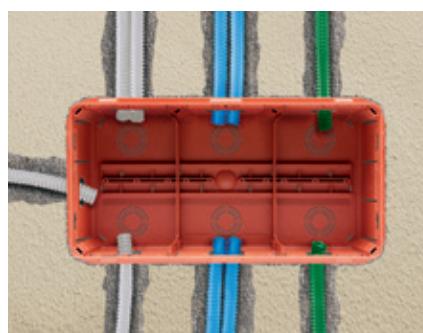

EN 61034-2
EN 60754-2

The FK Range conduits comply with Standards EN 61386-1 and EN 61386-22.

Flexibility

The profile of the FK15 conduits is characterised by a special geometry of the ribs to offer greater flexibility, higher load resistance and reduced thermal memory - characteristics that simplify and speed up the laying procedure inside the raceway.

Line identification

The wide choice of colours in the FK15 Arcobaleno range ensures a valid solution for modern electrical systems with their increasingly complex and subdivided structure, where the identification of the different lines is essential.

FKCO Range conduits

FKCO Range, medium pliable conduits 33212 classification: thanks to the particular embodiment of the double wall, ensuring total protection against the penetration of liquid components of "self-leveling" concrete. The outer covering also provides an additional protection against stamping, crush and shock in construction site.

Range of spiralled sheaths

DF range: system of spiralled sheaths with 2311 classification in 14 different diameters - from 8 to 60mm - in grey, black and blue. 12-mm, 16-mm, 20-mm and 25-mm diameters are also available in the Light version with 1311 classification for non-heavy-duty applications.

Sheaths and couplings with an IP54 degree of protection, in grey and black are available, with metric, PG and GAS thread for connecting boards, boxes and rigid conduits: a system suitable for exposed systems for all uses in the industrial and commercial sectors. Thanks to its high flexibility and resistance, the DF range is the winning solution for connecting and powering moving mechanical components.

The DF sheaths comply with Standards EN 61386-1 and EN 61386-23.

Range of access chamber systems: versatility and convenience

Available in 4 sizes - from 200 to 550mm - with high resistance and gridded covers, they are ideal for junctions, as wall chasers for electrical systems, or for telecommunication applications. Particularly suitable for public lighting systems or earth systems. Thanks to its thermoplastic materials, pre-cut base and the possibility of overlapping, the PZ range is a valid alternative to typical concrete electrical boxes, ensuring optimum resistance and unaltered long-term performance.

Range of cable ducts: flexibility of use

The special dual-wall form of the FU cable ducts, made from PEHD and available in 10 diameters (40-200mm) with built-in cable puller, allows very narrow curvature radiiuses (8 times the outer conduit diameter) and can even be laid in excavations that are not perfectly aligned.

Small details can have a great impact on safety

A complete, professional range of ties.

These products are used in boards, enclosures and junction boxes as well as more general applications.

Though simple, ties are key elements for the safe operation of electrical systems.

The range consists of 6 different product lines, in versions for wiring (PA 66) and the L.T.R. family (PA 12) with double head for outdoor applications, guaranteeing the seal even under extremely heavy-duty conditions.

The high performance ties in PA12 - a highly prized material characterised by low hygroscopic capacity - are particularly suited to outdoor use, even at low temperatures.

These ties, with dimensions of 9x265mm and more, have a double head.

The range is completed with special fixing accessories.

Cable glands and couplings

A complete range of cable glands and couplings for conduits and boxes. Cable glands with metric and PG pitch (IP68) and PG pitch thread (IP66). Special accessories are also available, such as cable glands with rigid conduit housing, conduit-box couplings with IP66 and IP44 degrees of protection, and multi-diameter cable glands.

There is also a full selection of metal cable glands (version IP65 and IP68, complete with an o-ring gasket on the box side), closure caps and extensions IP65, and fixing nuts. All the items are made of nickel-plated brass, and are fully compatible with the connectors and metal boxes of the GW Connect range.

Fixing accessories for conduits and cables

The GEWISS system of plastic and metal fixing devices is now extended with a series of products conceived to meet every possible installation requirement and provide the ideal solution in every type of system. Designed to simplify and speed up the conduit and cable laying phases, the Gewiss range responds to the increasingly specific and specialist needs of modern systems.

Quick, safe installation is an increasingly important factor when it comes to choosing system components. To meet the need for faster installation while still maintaining high levels of reliability and safety, GEWISS also offers a range of plastic and metal supports with incorporated wall plug for conduits and cables.

• = Suitable

Note: the 44 ME range terminal blocks with indirect screw-tightening are mounted on plates, or on the bottom of the boxes, using the suitable GW 44 682 adapter. For 48 PTC range boxes on the other hand, use code GW 44 683. The 44 ME range terminal blocks with indirect plate-tightening are mounted on the DIN rail of the 48 PT DIN boxes, using the suitable GW 44 720 support.

In yellow: same compatibility also for PT DIN GREEN WALL and CM GREEN WALL versions.
